**Fact Sheet:**

**Degree Completion Programs for Registered Nurses: RN to Master’s Degree and RN to Baccalaureate Programs**

Quality patient care hinges on having a highly educated nursing workforce. Research has shown the lower mortality rates, fewer medication errors and quality outcomes are all linked to nurses prepared at the baccalaureate and higher degree level. The American Association of Colleges of Nursing (AACN) supports the career ladder concept for nursing and understands that education enhances both clinical competency and patient care.

To facilitate a better educated workforce, degree completion programs provide additional education to registered nurses (RNs) who received their initial nursing preparation in diploma and associate degree (ADN) programs. These bridge programs build on previous learning, prepare nurses for a higher level of nursing practice, and provide RNs with the education necessary to move forward in their nursing careers.

**RN to Master’s Degree Program**

Currently, there are 230 programs available nationwide to transition RNs with diplomas and associate degrees to the master’s degree level (MSN, MS or Master of Science in Nursing degree). These programs prepare nurses to assume positions requiring graduate preparation, including roles in administration, teaching, research, and as Clinical Nurse Leaders. Master’s degree-prepared nurses are in high demand as expert clinicians, nurse executives, clinical educators, health policy consultants, and research assistants. The list of RN to MSN programs is available on the AACN Web site at [www.aacnnursing.org/Membership/Member-Program-Directory](http://www.aacnnursing.org/Membership/Member-Program-Directory).

- RN to MSN programs generally take up to 3 years to complete with specific requirements varying by institution and the student's previous course work. Though the majority of these programs are offered in traditional classroom settings, some RN to MSN programs are offered largely online or in a blended classroom/online format.

- The baccalaureate level content missing from diploma and ADN programs is built into the front-end of the RN to MSN program. Mastery of this upper level basic nursing content is necessary for students to move on to graduate study. Upon completion, many programs
award both the baccalaureate and master's degree.

- The number of RN to MSN programs has more than tripled in the past 20 years, from 70 programs in 1994 to 230 programs today. According to AACN’s 2016 survey of nursing schools, 36 new RN to MSN programs are in the planning stages.

**Talking Points**

- Nursing degree completion programs provide an important bridge for creating a more highly educated nursing workforce and enhancing patient care. Hospitals and other employers are encouraged to support nurses interested in completing these programs and strengthening their nursing practice.

- There is a misperception that RN to MSN programs can circumvent baccalaureate level nursing content which is not the case. In fact, the baccalaureate course work embedded in these programs must provide a sufficient bridge to graduate study in order to prepare students to complete graduate level courses and to meet the accreditation standards set by the Commission on Collegiate Nursing Education.

- For nurses interested in teaching careers, RN to MSN programs can be an important first step in their education en route to doctoral preparation. AACN recognizes the doctoral degree as the appropriate and desired credential for a career as a nurse educator. Though master’s level nurses with additional course work are prepared to teach in clinical capacities and entry-level nursing programs, the doctoral degree is necessary to fulfill the full nurse faculty role in senior colleges and universities and to achieve parity with faculty in the other health professions.

**RN to Baccalaureate Programs**

RN to Baccalaureate (BSN, BS or Bachelor of Science in Nursing) programs provide an efficient bridge for diploma and ADN-prepared nurses who wish to develop stronger clinical reasoning and analytical skills to advance their careers. RN to BSN programs build on initial nursing preparation with course work to enhance professional development, prepare for a broader scope of practice, and provide a better understanding of the cultural, political, economic, and social issues that affect patients and influence care delivery. These programs are growing in importance since many professional practice settings, including Magnet hospitals and academic health centers, now require or prefer the baccalaureate degree for specific nursing roles. The list of RN to Baccalaureate programs may be downloaded from AACN's Web site at www.aacnnursing.org/Membership/Member-Program-Directory.

- Currently 747 RN to BSN programs are available nationwide, including more than 600 programs that are offered at least partially online. Program length varies between 1 to 2 years depending upon the school’s requirements, program type and the student’s previous academic achievement.
• Concerns about the limited availability of RN to BSN programs are unfounded. In fact, there are more RN to BSN programs available than four-year nursing programs or accelerated baccalaureate programs for non-nursing college graduates. Access to RN to BSN programs is further enhanced since many programs are offered completely online or on-site at various healthcare facilities.

• Enrollment in RN to BSN programs is increasing in response to calls for a more highly educated nursing workforce. From 2015 to 2016, enrollments increased by 1.0 percent, marking the 13th year of increases in RN to BSN programs.

• Hundreds of articulation agreements between ADN and diploma programs and four-year institutions exist nationwide, including some statewide agreements, to facilitate students seeking baccalaureate level nursing education. Before enrolling in diploma and ADN programs, students are encouraged to check with school administrators to see what articulation agreements exist with baccalaureate schools and to determine which course work will be transferable.
