Building Competence in Artificial Intelligence: Preparing Nursing Students for Practice in the Age of Intelligence

AACN 2020 Doctoral Conference
Naples, Florida
January 31, 2020

1

Informatics Trends

- Precision Medicine
- Digital Technology
- Healthcare Cybersecurity
- Robotics
- Artificial Intelligence

2

Artificial Intelligence (AI)

- **computer systems**
- **capable of performing tasks that require human intelligence**
 - **decision making**
 - **object detection**
 - **solving complex problems**

3

Categories of AI

Stages Of Artificial Intelligence

- Artificial Narrow Intelligence
- Artificial General Intelligence
- Artificial Super Intelligence

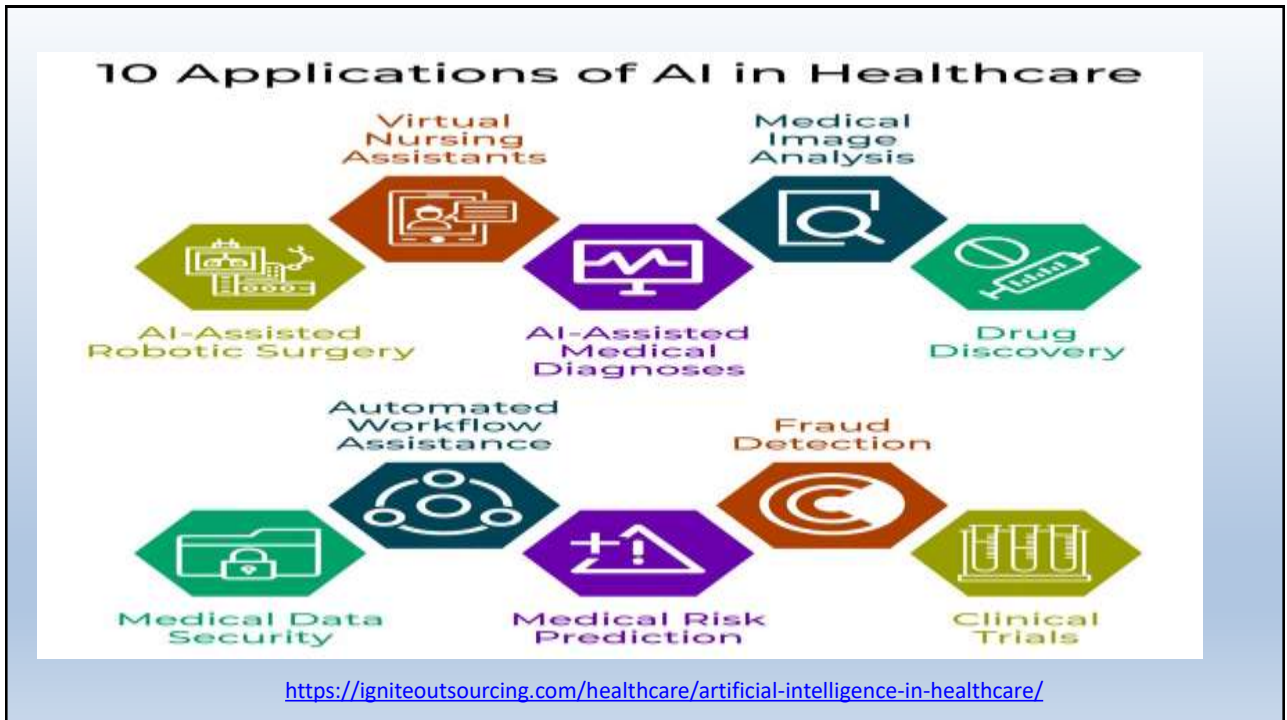

Types Of Artificial Intelligence

- Reactive Machines
- Limited Memory
- Theory Of Mind
- Self-aware

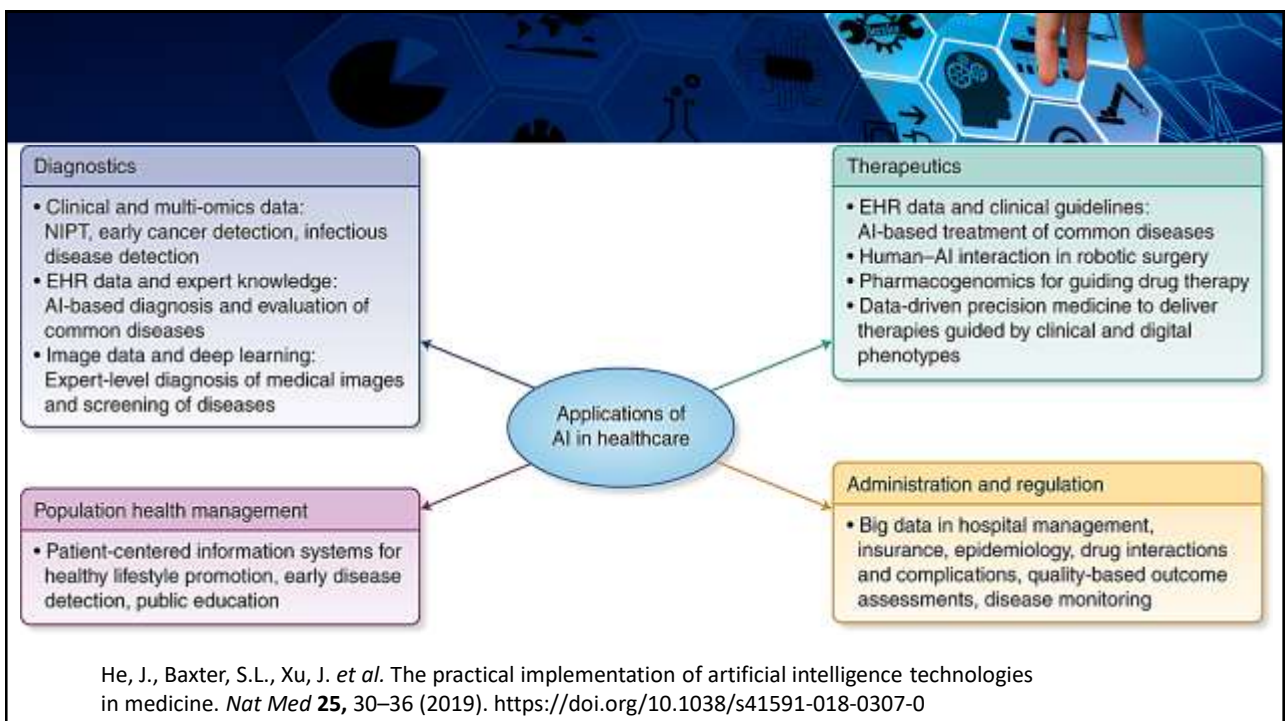

Branches Of Artificial Intelligence

- Machine Learning
- Deep Learning
- Natural Language Processing
- Robotics
- Expert Systems
- Fuzzy Logic

10 AI Applications That Could Change Health Care

APPLICATION	POTENTIAL ANNUAL VALUE BY 2026	KEY DRIVERS FOR ADOPTION
Robot-assisted surgery	\$40B	Technological advances in robotic solutions for more types of surgery
Virtual nursing assistants	20	Increasing pressure caused by medical labor shortage
Administrative workflow	18	Easier integration with existing technology infrastructure
Fraud detection	17	Need to address increasingly complex service and payment fraud attempts
Dosage error reduction	16	Prevalence of medical errors, which leads to tangible penalties
Connected machines	14	Proliferation of connected machines/devices
Clinical trial participation	13	Patent cliff; plethora of data; outcomes-driven approach
Preliminary diagnosis	5	Interoperability/data architecture to enhance accuracy
Automated image diagnosis	3	Storage capacity; greater trust in AI technology
Cybersecurity	2	Increase in breaches; pressure to protect health data

Harvard Business Review, Kalis, Collier, Fu, 2018.

BUSINESS INSIDER INTELLIGENCE

Pros and Cons of AI in Healthcare	
Pros	Cons
Improved specificity of diagnosis	Staff resistance
More rapid diagnosis	Increased equipment cost
Decreased treatment time	Need specialized staff
Integration of large amounts of data	Continued lack of interoperability
Decrease admissions	Privacy and security concerns
Decrease LOS	Loss of non-specialized staff
Improve time use with decreased unnecessary tasks	Lack of patient trust

11

By 2030 what it will mean to be smart is taking our cognitive and emotional skills to a higher level since AI and machine learning will do the analytical work.

Future Work INSTITUTE

The Centre for Global Inclusion
RESEARCH, EDUCATION, SOLUTIONS

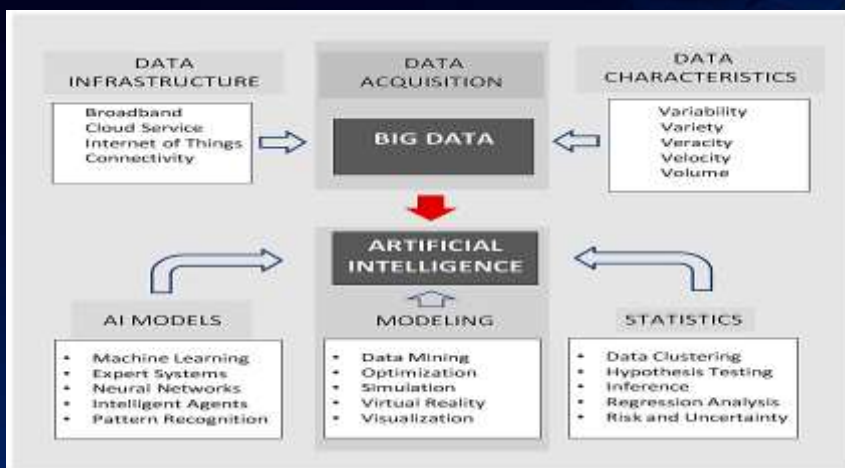

12

Cognitive Skills

- Informatics Concepts
 - Data Science
 - Information retrieval and synthesis
 - Statistics and evidence-based medicine appraisal
 - Interpretation of predictive models
 - Evaluation of diagnostic performance measures
 - Avoidance of Data Bias
- Innovation/Entrepreneurship

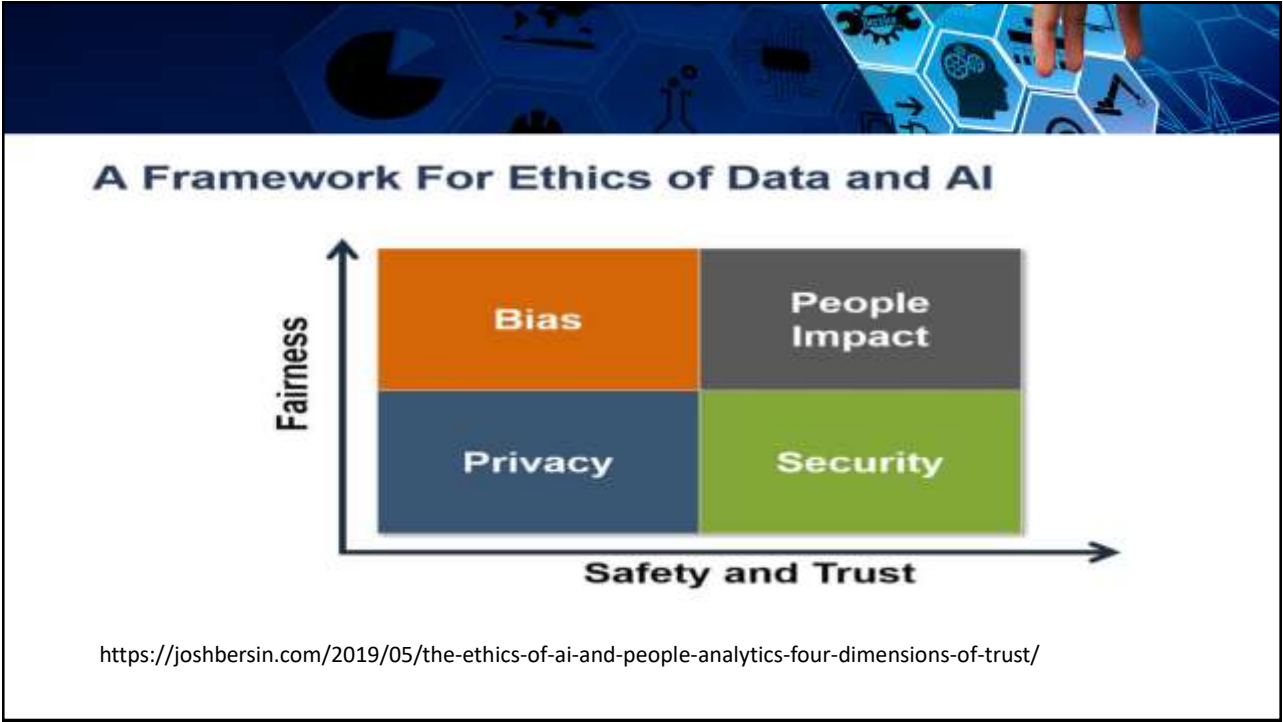

13

Data Drives Artificial Intelligence

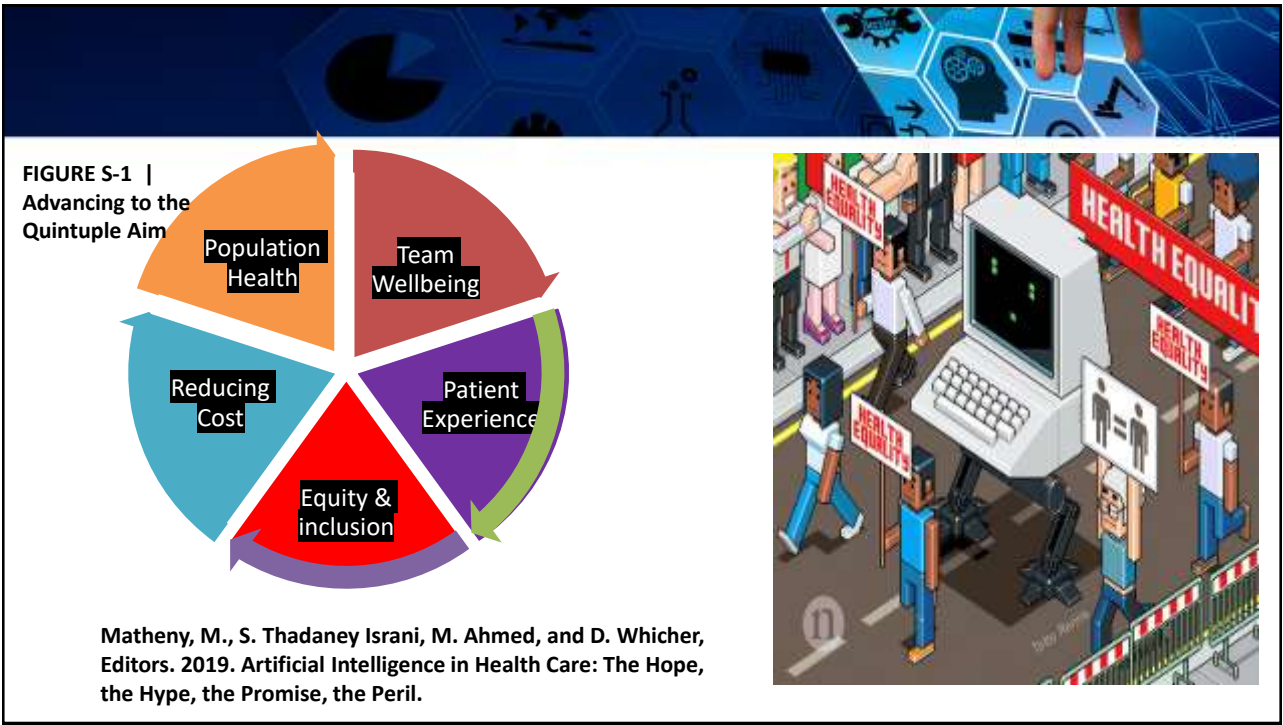

Benke, K.; Benke, G. Artificial Intelligence and Big Data in Public Health. *Int. J. Environ. Res. Public Health* **2018**, *15*, 2796.

14

15

16

Human Skills

- Trust
- Counseling
- Physical Examination with Touch
- Respectful Communication
- Patient Centered
 - Empathy

17

Enhancing Empathy

- Improve Healthcare Outcomes
- Improve Patient and Family Wellbeing
- Increase Patient Satisfaction
- Improves Medication Adherence
- Reduce Medico-Legal Risk
- Reduce Clinician Burnout
- Decreases Readmissions

 - **SONSIEL- Society of Nurse Scientists, Innovators, Entrepreneurs & Leaders**

21

Take Home Messages

- Many nursing faculty are not comfortable teaching advanced healthcare informatics topics (AKA: life beyond the EHR) and need education and practice.
- Nursing students at all levels need exposure to and practice using advanced healthcare informatics.
- Nursing students need curriculum, resources and opportunities to innovate and become entrepreneurs.
- Nursing faculty must balance innovation with human-centered care delivery to ensure the art of caring is not overshadowed by technology.
