

Let's make some Memory Stones!!

Supplies: Glass Wafers, Matte finish Mod Podge, 1 inch Circular Punch, Foam Brush, Card Stock (with printed or hand crafted images). Images should vary to appeal to everyone, various insignia: military, native american tribes, professional or community organizations, religious symbols, sports and team logos, nature, outdoor activities, hobbies, patterns and other abstract art. Be creative, use whatever you can find, just make sure the backside is blank for making fingerprints!

- ◆ Step 1: Punch out images with 1 inch circular punch, try to center the image before cutting.
- ◆ Step 2: Apply glue to the back of the glass wafer with your foam brush. Do not worry about excess glue, it dries completely clear.
- ◆ Step 3: Press paper cut out, image side down, into the glue on the back of the glass wafer. Center paper disc so that edges of paper do not overhang the glass wafer. This will keep the image from peeling off later.
- ◆ Step 4: Using the excess glue on the stone and brush, gently paint the back of the paper to seal it. The back must be completely sealed with glue because they will later be sealed with nail polish after fingerprinting is done.
- ◆ Step 5: Allow stones to dry for 24 hours before storing to prevent them from getting stuck together.
