

The Vision of the Professoriate in Baccalaureate and Graduate Nursing Programs

The professoriate of the future is educationally and experientially prepared to teach professional nurses to lead change and transform health care. Significant changes in nursing, the health professions, and higher education have impacted the expectations of faculty, including who is being recruited to schools of nursing and how they teach. Faculty must balance their roles as educators, clinicians, and researchers, as well as be nimble to meet the opportunities presented by an evolving healthcare system, diverse patient and student populations, innovations in educational technology, and shifts in learner expectations. These changes require close examination of the requirements to serve in faculty roles.

The vision of the professoriate for the future entails four domains: the faculty as the individual, the roles they occupy, their shared values, and the role of the academic nursing program in creating an intellectual environment that fosters professional growth whereby faculty and students feel nurtured and mentored (see Figure 1). For each of these four domains, it is vital that the concepts included are demonstrated, maintained, and remain current (see Figure 1). To meet the demand for high quality faculty in baccalaureate and graduate nursing programs, the American Association of Colleges of Nursing (AACN) endorses the following preferred vision of the nursing professoriate.

Faculty as the Individual

Faculty as the individual represents a comprehensive look at the educational and experiential preparation of the nursing professoriate including clinical practice, specialization, and certification. The individual faculty, from nursing or other disciplines, will demonstrate current and sustained competency in knowledge of the AACN *Essentials* appropriate for the baccalaureate and graduate level teaching, pedagogy, interpersonal skills, and leadership as well as competency in their area of practice/specialization. Doctoral education is the preferred terminal degree for the professoriate. The choice of either the professional doctorate or the research doctorate depends upon the candidate's choice and the career path the individual faculty seeks to take. Clinically focused graduate preparation and currency in practice is the minimal expectation for clinical instruction and the coordination and mentoring of preceptors. Regardless of the career path the faculty takes as an educator, they uphold the professional standards, ethics, and collegiality that is essential to lead and work in interprofessional teams.

Faculty Roles

The role of nursing faculty is multi-dimensional and requires demonstrated and sustained expertise in teaching, scholarship/research, practice, and leadership. Each of these components requires balance according to the needs of the profession, the institution, and the program. Within each of these components, the faculty assume a leadership role to mentor students and other faculty, engage in intra- and inter-professional collaboration, spur innovative curriculum development and learning modalities/resources, support shared governance, and pursue academic partnerships. The faculty also serve and provide

leadership in the program, within the academy, and externally in professional organizations and communities of interest.

Shared Values

Shared values are the fundamental beliefs of faculty that guide decisions and behavior. The faculty are leaders and share several common values, such as a commitment to inclusion and diversity, integrity, and responsibility. Furthermore, faculty dedicate themselves to enhancing and modeling a culture of learning in which lifelong learning, knowledge, and respect for worldviews beyond their own and the nursing profession are valued and cultivated. Implicit in shared values are the concepts of excellence in research, practice, and education, and integrity in all interactions. Professional behavior mandates civility, respect, dignity, and scholarly demeanor.

Academic Nursing Program

The academic nursing program, under the guidance of the dean/chair/director, provides the infrastructure, resources, and milieu in which faculty work and flourish. This environment fosters a commanding and comprehensive vision based on internal/external trends, champions community engagement, and supports a range of clinical, educational, and research foci tailored to the larger environmental context. The academic program enables faculty to meet current, emerging, and future healthcare needs of populations through purposeful integration with the higher education institution, health systems, and communities of interest.
