Objectives

• Explore the concept of Informatics.
• Identify the information and communication technologies used.
• Differentiate informatics as a subject matter for all nurses from that of the Informatics Nurse Specialist.
• Examine the five buckets of Domain 8 competencies.
• Consider integration versus standalone teaching.
• Appraise resources to use in both teaching and personal professional development.
Questions

• What is Informatics?
• What are the technologies?
• Who teaches informatics?
• How do you teach it?
Informatics versus Information/Communication Technology

• Informatics is a process that moved data to information to knowledge to wisdom.

• Information and communications technologies are tools as is paper and pencil and calculator.

Definition - Informatics

• **Informatics** is the science of how to use data, information and knowledge to improve human health and the delivery of health care services.

• **Biomedical and health informatics** applies principles of computer and information science to the advancement of life sciences research, health professions education, public health, and patient care. This multidisciplinary and integrative field focuses on health information technologies (HIT), and involves the computer, cognitive, and social sciences.

• **Health Information Technology** is an essential part of informatics but technology and technological considerations are only components of informatics as a science.

• **Health Information Technology** enables advancements in health care by providing the tools with which to set knowledge in motion.

The American Medical Informatics Association (AMIA)
https://amia.org/about-amia/why-informatics/informatics-research-and-practice
Definition – Nursing Informatics

Nursing informatics is the specialty that transforms data into needed information and leverages technologies to improve health and healthcare equity, safety, quality, and outcomes.

Some Background: Informatics is not new
Brief History – Informatics in Nursing

• 1950’s – Harriet H. Werley PhD, RN FAAN, FACMI - identified data processing needs for healthcare and explored potential uses of computers by nurses in care settings
• 1960s – The American Nurses Association - committee to identify priorities for the use of computers by nurses to support communication and decision making
• 1970s – First report of computer applications in nursing appears.
• 1980s - Nursing Informatics as a specialty gains momentum. Dr. Virginia Saba organizes a track for nursing papers at the Symposium on Computer Applications in Medical Care (SCAMC)
  Nursing Minimum Data set developed led by Drs. Werley and Norma Lang
  • Ozbolt and Saba, 2008

Brief History – Informatics in Nursing

• 1980s – Nursing terminologies began development
  Nursing Informatics as a specialty in graduate nursing began
• 1990s – Web based application development enabled due to internet introduction
  American Nurses Association and National League for Nurses convene conference of nursing informatics leaders. They produce: Next Generation Nursing Information Systems: Essential Characteristics for Professional Practices. This formed the basis for the specialty going forward.
• 1994 – the first ANA Scope and Standards of Nursing Informatics published
  • Ozbolt and Saba, 2008
The Informatics Nurse Specialist

Relationships – Competencies, Standards, Accreditation, Certification

COMPETENCIES FOR STUDENTS

ANA Scope and Standards of NI Practice and AMIA Advance Health Informatics Competencies

AACN Re-Envisioned Essentials

Advanced Practice Essentials (MSN & DNP)

Entry to Practice Essentials (BSN & Accelerated MSN)

ACCREDITATION STANDARDS FOR EDUCATION

Commission on Accreditation for Health Informatics and Information Management Education (CAHIIM)

Commission on Collegiate Nursing Education (CCNE)
Driving Forces

- Pandemics/Epidemics
- Societal demand/Consumer expectations
- Expansion of technology (proceeds policy, regulation, and payment)
- Public Policy
- Practice Needs
  - Policy
  - Regulation
  - Payment/Finance

Shaping Forces
Digital health, or digital healthcare, is a broad, multidisciplinary concept that includes concepts from an intersection between technology and healthcare.

Digital health applies digital transformation to the healthcare field, incorporating software, hardware and services.

Digital health includes mobile health (mHealth) apps, electronic health records (EHRs), electronic medical records (EMRs), wearable devices, telehealth and telemedicine, as well as personalized medicine.

Stakeholders in the digital health field include patients, practitioners, researchers, application developers, and medical device manufacturers and distributors. Digital healthcare plays an increasingly important role in healthcare today.
The Health Information Technology Landscape

- Electronic Health Records
- Personal Health Records
- Artificial Intelligence
- Robotics/Drones
- Assistive Living
- Mobile Apps
- Social Media
- Personalized/Precision Care
- Telehealth/Telepsych/Tele***
- Virtual/Augmented Reality

EXPANSION OF TECHNOLOGIES

- EHRs evolving new capabilities
  - Digital Voice Assistants
- Artificial Intelligence/Big Data
  - Predictive Models
  - Input Layer, Hidden Layer, Output Layer
  - Clancy, T (2020). Artificial intelligence and nursing: The future is now. JONA.
- Automation Technologies
  Robotics/Drones

  https://medicalfuturist.com/medical-drones-2021/
EXPANSION OF TECHNOLOGIES

• Personalized/Precision Healthcare
  • [https://youtu.be/fOKO_537YAU](https://youtu.be/fOKO_537YAU)
  • Fu, M.R., Kurnat-Thoma, E, Starkweather, A. (et al.)

• Social Media/OnLine Information
  • [https://www.patientslikeme.com](https://www.patientslikeme.com)

• Virtual/Augmented Reality
  • [https://youtu.be/uCQU6g1J4HM](https://youtu.be/uCQU6g1J4HM)

EXAMPLE: MERCY VIRTUAL

• Mercy Virtual
  • [https://youtu.be/d-Fu2mpK5iE](https://youtu.be/d-Fu2mpK5iE)
There is a problem – There is a Gap

- Findings demonstrate a significant gap in informatics competency among practicing clinicians, including nurses.
  - Nurses entering the workforce are not prepared and lack informatics competencies needed (Found, 2012).
  - Competency deficits were found in a pretest of *informaticists* in a facility in the Southeast US (Pordeli, 2018).
  - Brunner et al (2017) in a 3-phase study identified the need for education and curriculum reform to reinforce eHealth capability and reduce the gap between academia and application.
  - The EU/US eHealth Work Project carried out a measure and mapping project.
    - In 2017, a Gap Analysis was conducted targeting 1000 respondents
    - 877 participants responded from the US and EU
    - Found pressing need for training particularly among nurses and physicians
Significant Gap findings

• Lack of knowledge and skills of providers and caregivers.
• Lack of knowledge and skills of faculty and facility educators.
• Lack of healthcare manager and academic administrators’ understanding and knowledge.
• Limited availability of courses and programs in facilities and academia.
• Limited quality and quantity of training materials.
  • Inability of educators and faculty to understand content and materials
  • Lack of consensus on how to teach this content
  • Inconsistent infusion of knowledge and skills

(Blake, Blake, Shaw, Thye, Varri et al, 2018; Hunter, McGonigle, & Hebd, 2013; McBride, Tietze & Fenton, 2013; Spencer, 2012)

Additional Evidence

• Characteristics of US DNP faculty in 114 educational programs were evaluated. Only 21 schools reported that at least 50% of their faculty knew and understood TIGER competencies. (Fulton, Meek, & Walk, 2014)
• A survey of faculty teaching undergraduate nursing students in 272 CCNE accredited schools found that 86% had no TIGER training. (Roney, Westrick, Acri, Aronson & Rebeschi, 2017)
• A review of 12 nursing programs in the Kansas City metropolitan area showed that only two offered a course with a focus on informatics. (Belchez, 2016)
Competencies – We are Not alone

- EU/US TIGER International Competency Synthesis Project
- Canadian Association of School of Nursing
- Scotland
  - https://www.nhsresearchscotland.org.uk/research-in-scotland/data

- South America – Brazil
- China, Korea, Taiwan

Informatics Does Not Belong in a Siloe

Informatics as a process and information and communications technologies are tools used everyday in every care situation.
Some givens

- Domain 8 supports and aligns with the other Domains:
  - Knowledge for Nursing Practice
  - Person-Centered Care
  - Population Health
  - Scholarship for Nursing Practice
  - Quality and Safety
  - Interprofessional Partnerships
  - Systems Based Care
  - Professionalism
  - Personal, Professional, and Leadership Development

ADDRESSING THE GAP:
RE-ENVISIONED DOMAIN 8
COMPETENCIES
Doamin 8 - Five Interrelated Buckets

THE RE-ENVISIONED NURSING ESSENTIALS

• The Essentials – 2021
  • Domain 8: Informatics and Healthcare Technologies
  • Descriptor: Information and communication technologies and informatics processes are used to provide care, gather data, form information to drive decision making, and support professionals as they expand knowledge and wisdom for practice. Informatics processes and technologies are used to manage and improve the delivery of safe, high-quality, and efficient healthcare services in accordance with best practice and professional and regulatory standards.
  • Contextual Statement: Healthcare professionals interact with patients, families, communities, and populations in technology-rich environments. Nurses, as essential members of the healthcare team, use information and communication technologies and informatics tools in their direct and indirect care roles. The technologies, the locations in which they are used, the users interacting with the technology, the communication occurring, and the work being done all impact the data collected, information formed, decisions made, and the knowledge generated. Additionally, the utilization of information and communication technologies in healthcare settings changes how people, processes, and policies interact. Using these tools in the provision of care has both short- and long-term consequences for the quality of care, efficiency of communications, and connections between team members, patients, and consumers. It is essential that nurses at all levels understand their role and the value of their input in health information technology analysis, planning, implementation, and evaluation. With the prevalence of patient-focused health information technologies, all nurses have a responsibility to advocate for equitable access and assist patients and consumers to optimally use these tools to engage in care, improve health, and manage health conditions.
### Domain 8 – Informatics and Healthcare Technologies

#### Entry to Professional Practice

8.1 Describe the various information and communication technology tools used in the care of patients, communities, and populations.

<table>

Domain 8 – Informatics and Healthcare Technologies

8.5 Use information and communication technologies in accordance with ethical, legal, professional and regulatory standards, and workplace policies in the delivery of care.

8.5a Identify common risks associated with using information and communication technology.

8.5b Demonstrate ethical use of social networking applications.

8.5c Comply with legal and regulatory requirements while using communication and information technologies.

8.5d Educate patients on their rights to access, review, and correct personal data and medical records.

8.5e Discuss how clinical judgement and critical thinking must prevail in the presence of information and communication technologies.

8.5f Deliver care using remote technology.

8.5g Apply risk mitigation strategies to reduce misuse of information and communication technology.

8.5h Assess potential ethical and legal issues associated with the use of information and communication technology.

8.5i Recommend strategies to protect health information when using communication and information technology.

8.5j Promote patient engagement with their personal health data.

8.5k Advocate for policies and regulations that support the appropriate use of technologies impacting health care.

8.5l Analyze the impact of federal policy and regulation on health data and technology in care settings.

Strategies Used – Pros and Cons

• Individual informatics courses
• Modules added into other existing courses
• Unfolding Case Study used in existing courses
