David Weinberger PhD

david@weinberger.org

David Weinberger, Ph.D. explores the effect of the technology on ideas. He has long focused on the Internet, but since the mid 2000 teens he has turned his attention to the philosophical implications of AI. He has been a fellow, senior researcher, and member of the Fellows Advisory Board at the Berkman Klein Center for Internet & Society at Harvard University since the early 2000s. Trained as a philosopher (with a doctorate from the University of Toronto), David was co-director of the Harvard Library Innovation Lab, and a journalism fellow at Harvard's Shorenstein Center. He has also been a marketing VP at pioneering Web companies, an adviser to high tech companies and to presidential campaigns, and a Franklin Fellow at the U.S. State Department. For four years he was a writer-in-residence at Google AI's People and AI Research group and its Moral Imagination group. He edits the Strong Ideas open access book series for MIT Press. In countless publication and five books he has explored the effect of the Internet and AI on knowledge, on how we organize our ideas, on the disruptive architecture of the Web, and on the core concepts by which we think about our world. His latest book, *Everyday Chaos*, argues that AI and the Internet are transforming our understanding of how the future happens, enabling us to acknowledge the chaotic unknowability of our everyday world. — a Copernican-scale change in our self-understanding.
